EDUCATION

Bachelor of Advanced Computing (Honours)

Computational Data Science, Pursuing thesis in MongoDB Cloud Database Freshness

The University of Sydney *July 2023 - Aug 2027*

EXPERIENCE

Full Stack Developer Intern

Multivrse Digital (Sydney, NSW) *Dec 2025 - Apr 2026*

- Assisted the migration of production infrastructure from AWS to Akamai Linode with no customer facing downtime
- Owned the multilingual RAG chatbot end to end, from retrieval pipeline to model selection and integration, enabling automated support across 16 languages
- Shipped and maintained the company's production web presence with CI/CD deployments, performance tuning, and technical SEO
- Ran early-stage business development: outreach, founding-client meetings, and translating client requirements into technical scope

Software Developer Intern

Aurm (Bangalore, India) *Jan 2026 - Feb 2026*

- Owned the automated vault-recording pipeline: onboarded cameras now trigger on client transaction and system events and persist recordings locally with cloud upload, removing manual capture from every vault session
- Built the event-driven notification workflow on AWS SNS/SQS, decoupling recording triggers from downstream consumers so failed and edge-case events retry instead of dropping
- Restructured the FaceID service codebase and integrated gender detection into it; modelled the MongoDB schema backing client transactions across Aurm's Bay Area and Vault products

---

STARTUPS

Co Founder - Mudivu

AI human-simulation platform for enterprise consumer decision-making (see here) *June 2026-Present*

- Co-founded a multi-agent LLM platform that predicts Indian consumer response to pricing, packaging, and campaign decisions. Backed by Campus Fund (SEBI-registered), with Prestige Estates Projects Limited (NSE/BSE-listed) as design partner
- Validated simulation output against Euromonitor 19-brand market-share data across 1,500 simulated choices, achieving 2.09% MAE and 0.108 KL divergence
- Designed the agent model: a two-round deliberation pipeline with peer influence, grounded in an 8-parameter behavioural-economics profile calibrated from Census, PLFS, and NFHS-5 distributions rather than prompt engineering
- Built the product surface and infrastructure: FastAPI backend, React/Vite dashboard, ingestion and benchmarking stack, and a distributed execution layer running 5,000+ concurrent agents

---

STUDENT SOCIETIES

Sydney University Artificial Intelligence Association (SUAIA)

Founding Member & Treasurer *Dec 2024 - Present*

- Co-founded USYD's first and only student-run AI society, establishing its mission to bridge the gap between academic learning and real-world AI application across a university-wide student base
- Organised and delivered workshops, speaker sessions, and industry nights featuring senior professionals from FAANG companies and YC backed startups, exposing students to cutting-edge industry practices and career pathways in AI
- Scaled the society to ~600 active members, making it one of USYD's largest societies

---

SKILLS

Languages: Python, TypeScript, JavaScript, Java, Swift, R, SQL, HTML, CSS

AI & Machine Learning: LangChain, LiteLLM, RAG pipelines, multi-agent systems, sentence-transformers, vector search (pgvector, ChromaDB), prompt engineering, structured LLM output (Pydantic/instructor), OpenAI / Anthropic / Gemini APIs, Scikit-Learn, LightGBM

Backend & Infra: FastAPI, Docker, AWS (SNS, SQS, EC2, S3), Akamai Linode, CI/CD, REST API design, async Python, SQLAlchemy, Vercel

Data & Analytics: Pandas, NumPy, GeoPandas, Statsmodels, PostgreSQL, MySQL, MongoDB, Oracle, Plotly, Power BI, Tableau, Excel

Frontend: React, Vite, Next.js, Shiny, Figma
